

Gemini LLM API: Test Screenshots

Python + FastAPI + Google Gemini API, tested with Swagger UI

1. Swagger UI: endpoints and request

Swagger UI showing the GET / health and POST /generate endpoints with a JSON prompt as the request body.

The screenshot shows the Swagger UI interface for the POST /generate endpoint. The endpoint is labeled "POST /generate Generate". The "Parameters" section indicates "No parameters". The "Request body" section is marked as "required" and has a dropdown menu set to "application/json". Below this, the "Edit Value" section shows a JSON schema for the request body:

```
{  "prompt": "Explain APIs in one line!"}
```

. There are "Cancel" and "Reset" buttons in the top right corner of the request body section.

2. Successful response (200)

The prompt "explain ai in one line" returns 200 with the model name and Gemini's response.

The screenshot shows the Swagger UI interface displaying the successful response (200) for the POST /generate endpoint. The "Request body" section shows the JSON schema:

```
{  "prompt": "explain ai in one line"}
```

. Below the "Execute" button, the "Responses" section shows the response details. The "Curl" section displays the command:

```
curl -X 'POST' \  'http://127.0.0.1:8000/generate' \  -H 'accept: */*' \  -H 'Content-Type: application/json' \  -d '{  "prompt": "explain ai in one line"  }'
```

. The "Request URL" section shows:

```
http://127.0.0.1:8000/generate
```

. The "Server response" section shows the status code "200". The "Response body" section displays the JSON response:

```
{  "model": "gemini-1.5-flash",  "prompt": "explain ai in one line",  "response": "***AI is technology that enables machines to learn, solve problems, and perform tasks that typically require human intelligence.**"}
```

. The "Response headers" section shows:

```
content-length: 285  content-type: application/json  date: Tue, 06 Oct 2024 08:28:47 GMT  server: uvicorn
```

. There is a "Download" button next to the response body.

3. Missing API key (500)

With no key set, the API returns 500 "GEMINI_API_KEY is not configured", so the error handling works.

Execute

Clear

Responses

Curl

```
curl -X 'POST' \
  'http://127.0.0.1:8000/generate' \
  -H 'accept: */*' \
  -H 'Content-Type: application/json' \
  -d '{
    "prompt": "Explain APIs in one line"
  }'
```

Request URL

http://127.0.0.1:8000/generate

Server response

Code

Details

500

Error: Internal Server Error

Undocumented

Response body

```
{
  "detail": "GEMINI_API_KEY is not configured"
}
```

Download

Response headers

```
content-length: 40
content-type: application/json
date: Tue, 04 Oct 2026 07:49:03 GMT
server: uvicorn
```

Responses

Code	Description	Links
200	Successful Response	No links
Media type: application/json Content Accept Header: Example Value Schema "string"		
422	Validation Error	No links
Media type: application/json Example Value Schema <pre>{ "detail": { "loc": ["string", "tag", "string", "type", "string", "name", "string", "cta"] } }</pre>		

4. Model overloaded (502)

When Gemini is under high demand, the API returns 502 with the upstream error message passed through.

Request URL

http://127.0.0.1:8000/generate

Server response

Code

Details

502

Error: Bad Gateway

Undocumented

Response body

```
{
  "detail": "Gemini API error: This model is currently experiencing high demand. Spikes in demand are usually temporary. Please try again later."
}
```
